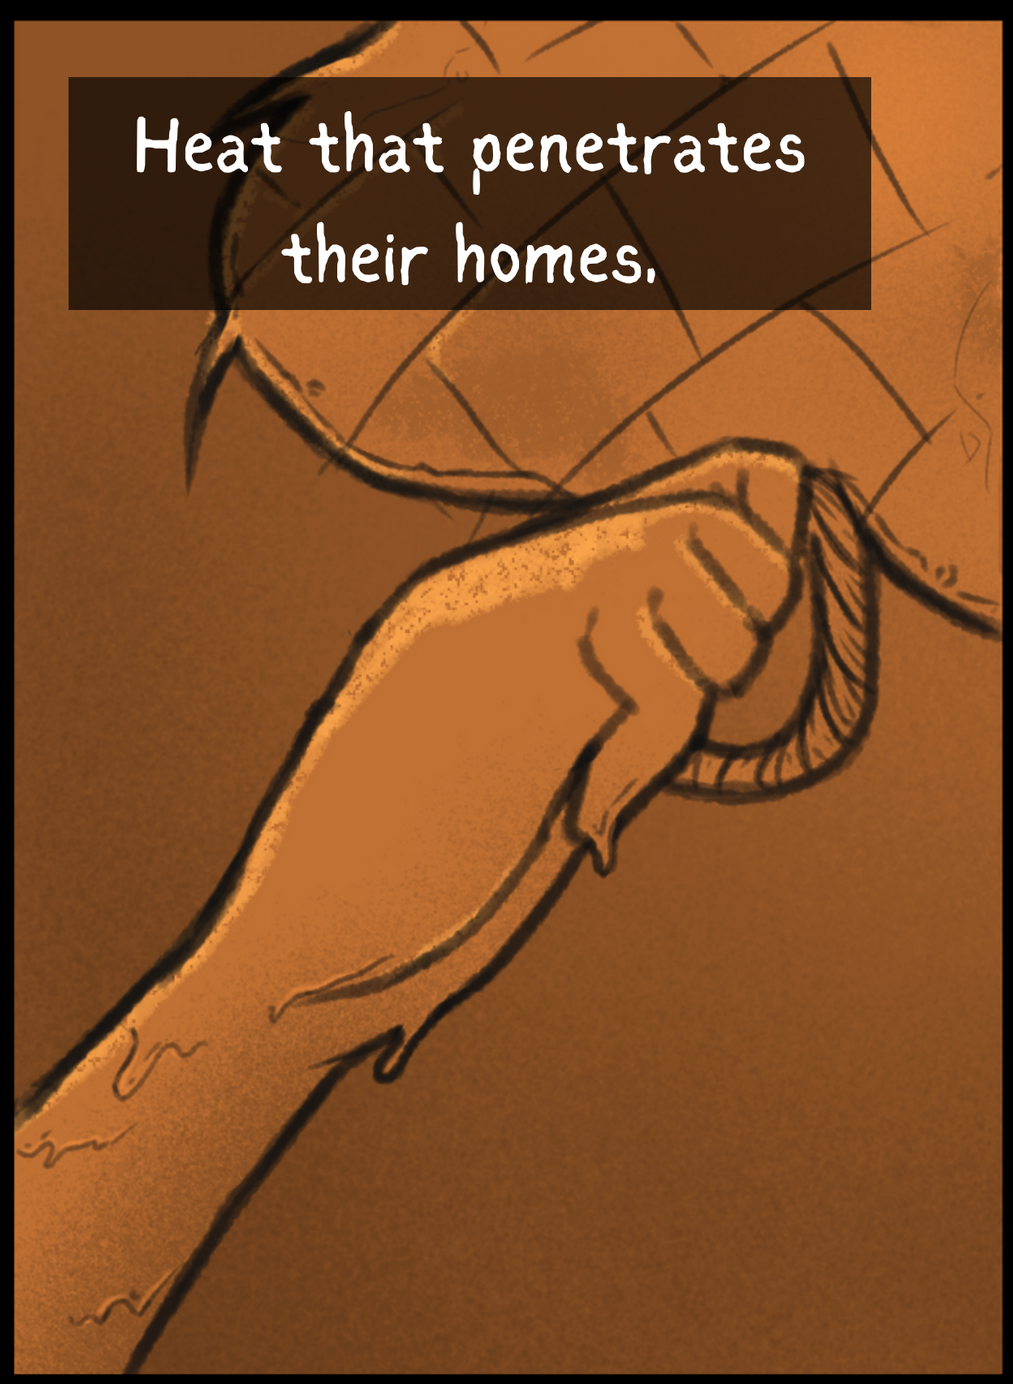
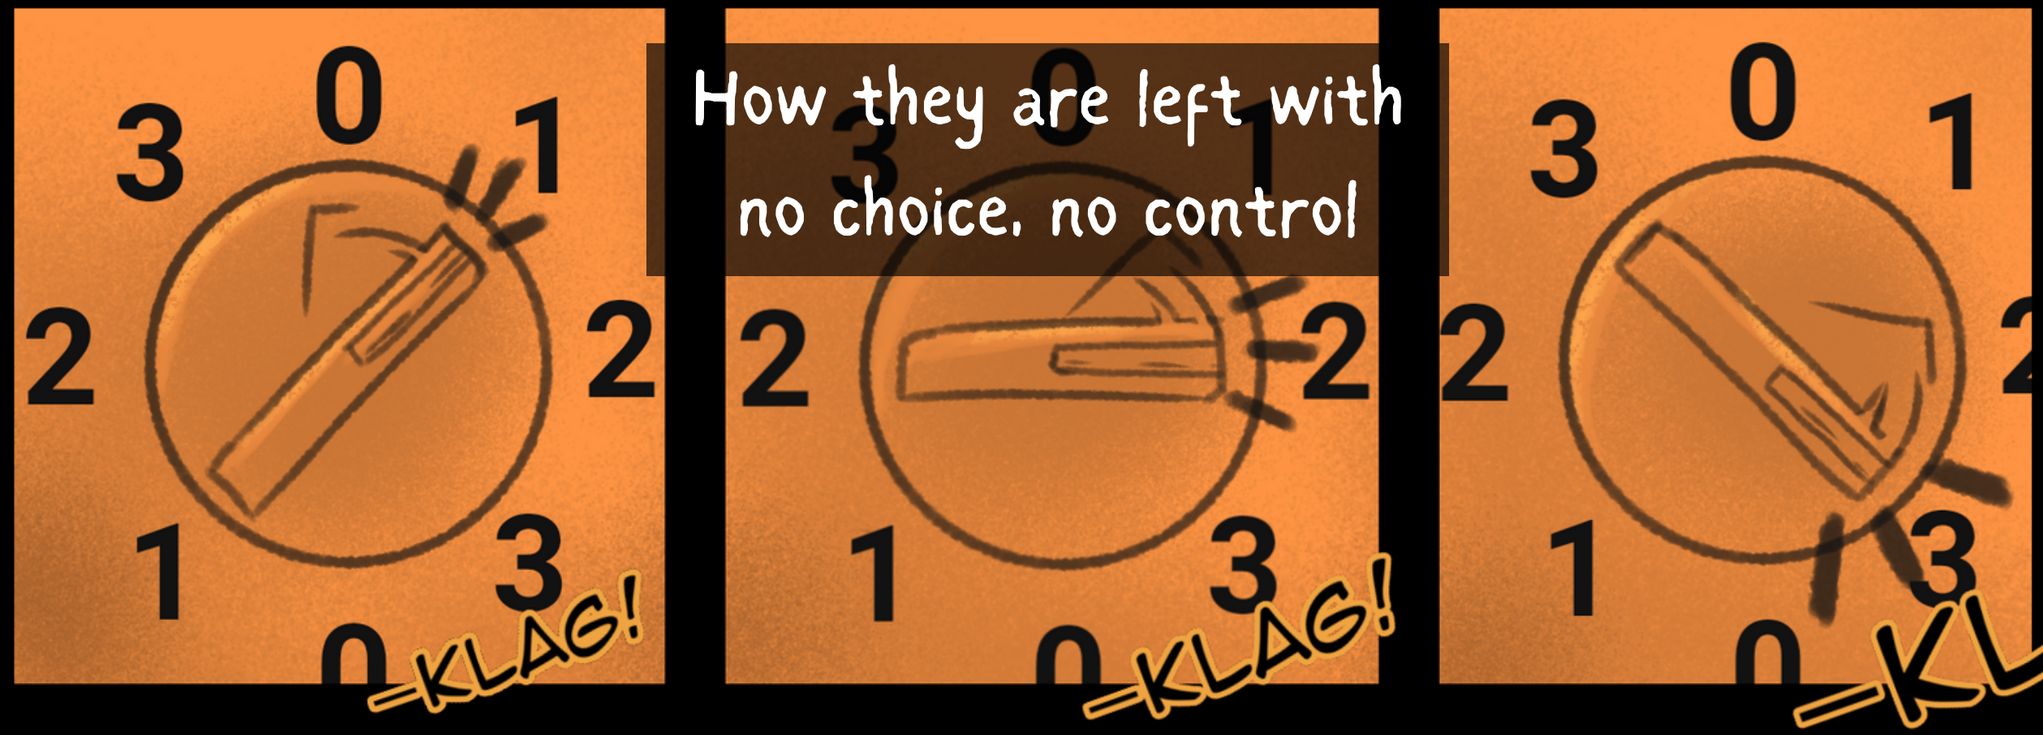
Today is a day greeted by the dry and cool breeze, I suppose, but why does it feel like the height of summer? When did mornings begin to greet us like this? What kind of a world, of a tomorrow will welcome us? Change supposedly opens doors, does it? But what a change have we brought upon to her.

Nurture. Life. Future. All that she is, she gave us. We began to wander, to achieve - a never-ending seek. I wonder If only we knew her.

If only we would look after her, those vulnerable wouldn't have to endure.





-uWAAA

but to carry on.

If only we would look after her, calamities and destruction wouldn't happen.

Raging storms and surging waters would have been clear skies and calm oceans.

Helpless lives, dreams, and hopes wouldn't have been revoked.

If only we would look after her,
then the agrifolks wouldn't have to
suffer

Their sweat and hardships would
have been greeted with bountiful
harvests

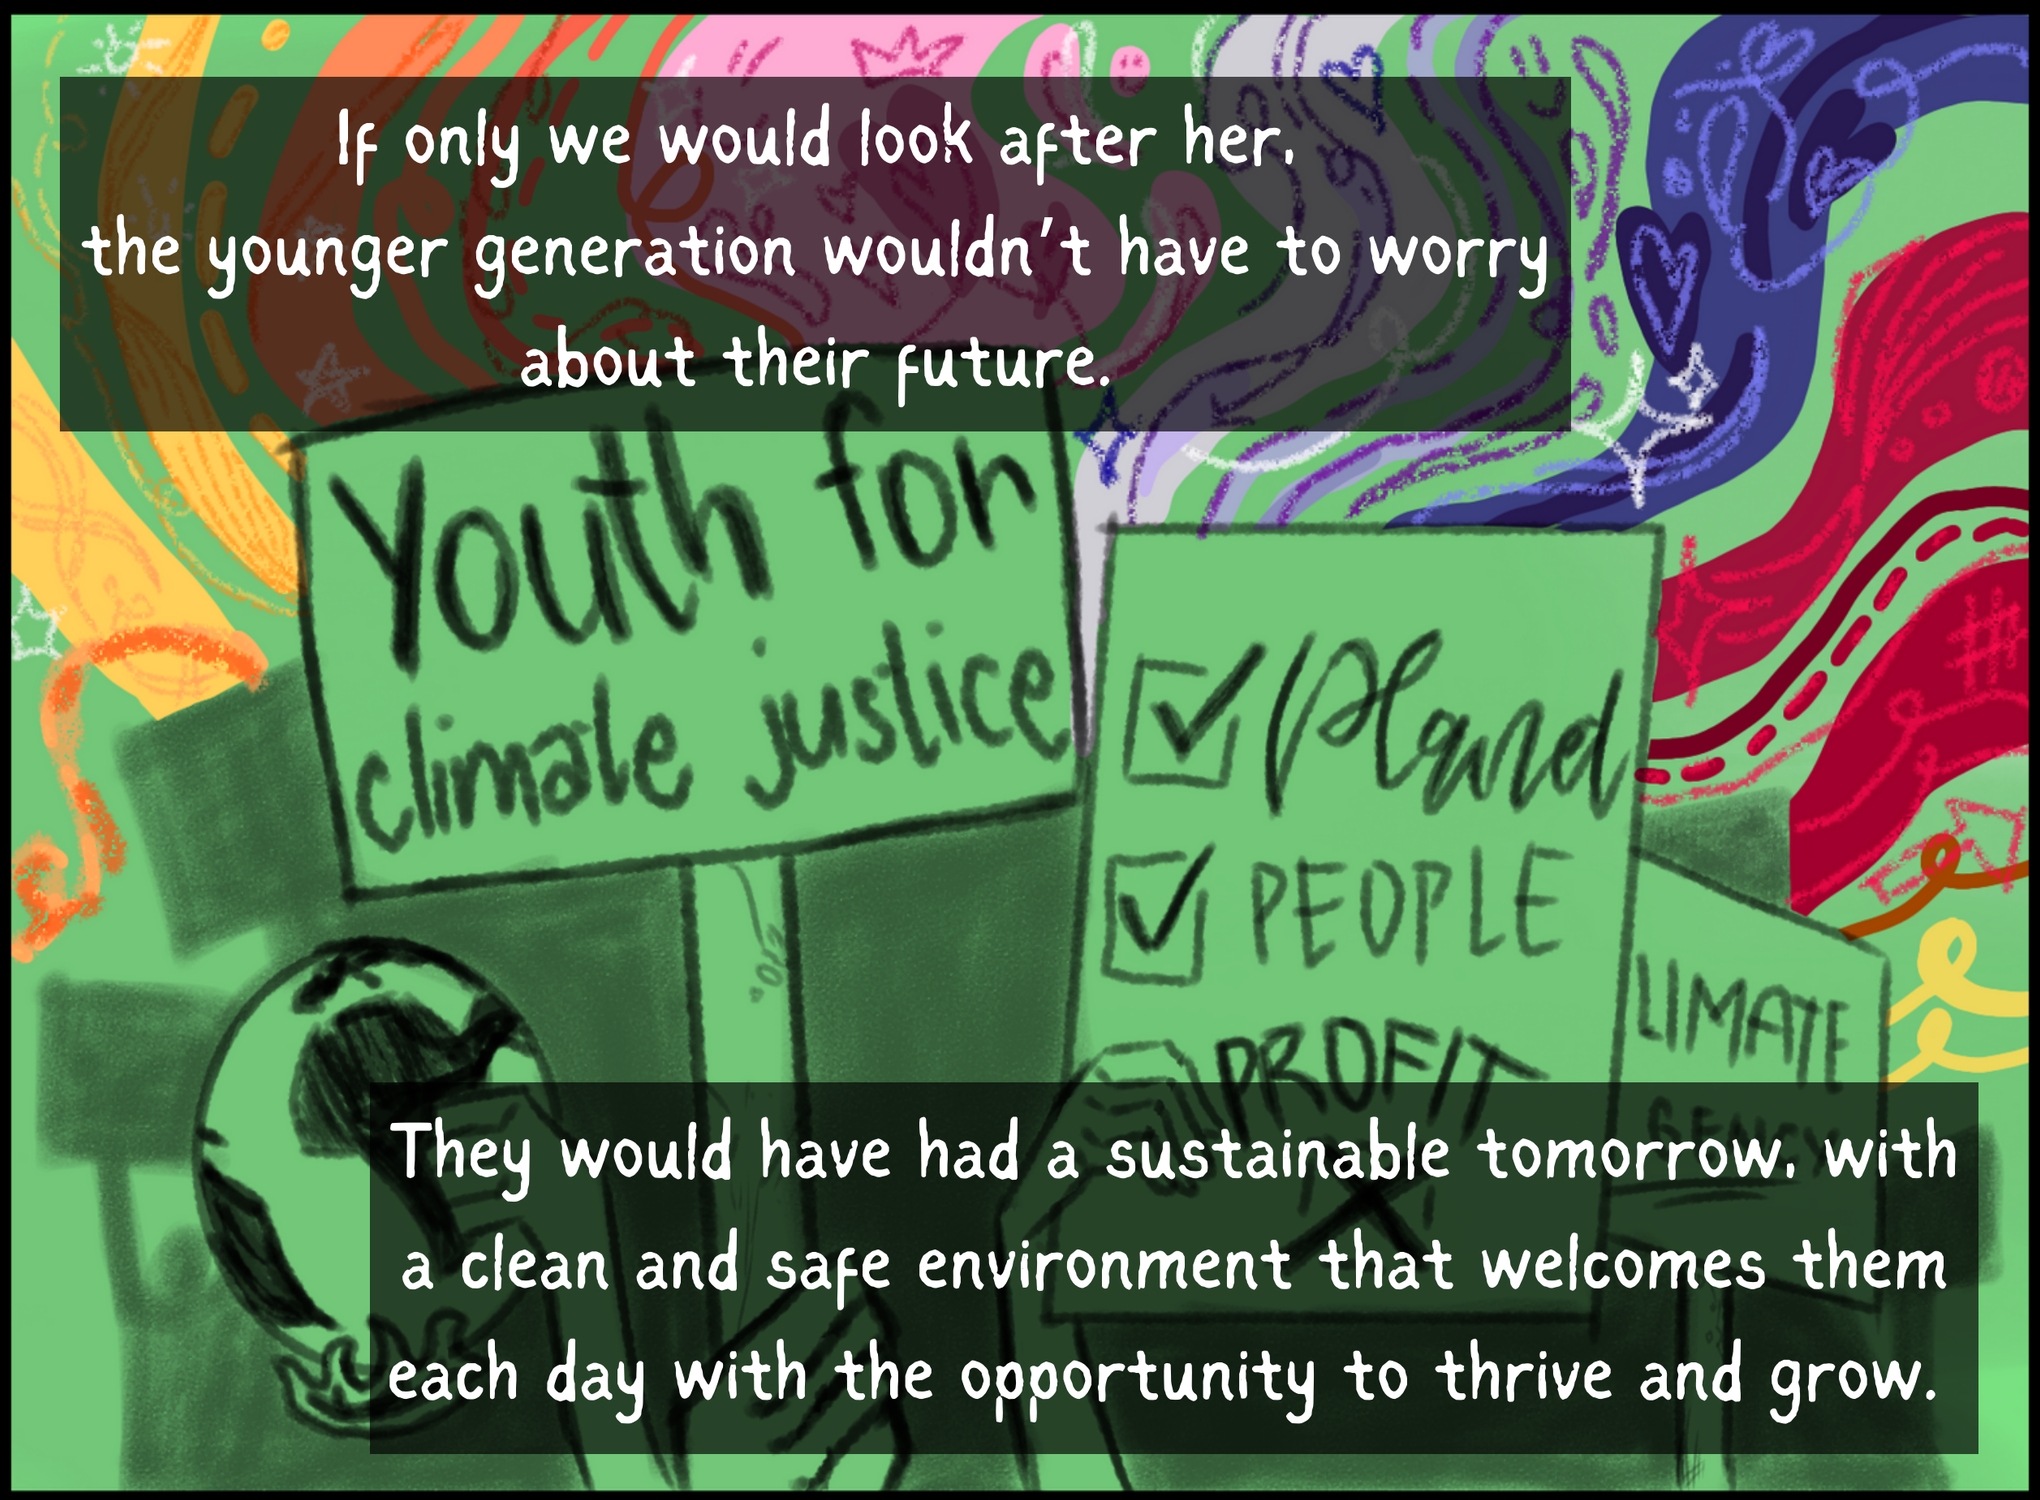
Not with dried crops or scarcity of fish, ending up
with uncatered tables and unmet needs

If only we would look after her, there wouldn't be such an imbalance in nature

Life and biodiversity are being diminished

With more intense heat waves, rising sea levels, melting of ice, extreme weather—animals lose their home too.

If only we would look after her,
the younger generation wouldn't have to worry about their future.



They would have had a sustainable tomorrow, with a clean and safe environment that welcomes them each day with the opportunity to thrive and grow.

If only we would look after, and if that we can achieve. For how long are we going to just preach and hope? When our regrets and aims could have been an action that brought change— change that sustains and nurtures.

If only we had known how to care for her, we could have been better children of hers, and we shall do so. This change we have brought upon her, is a change we can also transform for her and our greener future.

So, you, what "ifs" are you willing to conquer for you, the world, and her?

AIR-QUALITY RESPIRATORY ILLNESSES

GREENHOUSE GAS LEVELS ARE AT AN ALL-TIME HIGH

CLIMATE CHANGE COULD BE IRREVERSIBLE BY 2023

WE USE MORE OF THE EARTH'S RESOURCES THAN IT CAN RENEW

LOSS OF HABITAT AND SPECIES

MORE THAN 1 MILLION SPECIES FACE EXTINCTION

OUR OCEANS ARE DYING

IF ONLY WE WOULD LOOK AFTER HER

(2023)
